Patient Name	: Mr. Ramesh Iyer	**Ref. No**	: CIC/MR/26/0981
Age / Sex	: 68 Y / Male	**Date**	: 05/06/2026
Referred By	: Dr. Anita Rao, MD	**Study**	: MRI Right Knee (Plain)

MRI RIGHT KNEE (PLAIN)

Technique: Multiplanar PD fat-sat, T1 and T2 sequences on 1.5T.

FINDINGS

Medial meniscus: horizontal degenerative tear in the body of the medial meniscus reaching the inferior articular surface.

Lateral meniscus is normal.

ACL, PCL, MCL and LCL are intact.

Patellofemoral joint: grade II chondromalacia patellae with mild cartilage thinning.

Mild joint effusion. No bone marrow oedema.

IMPRESSION

1. **Horizontal degenerative tear of the body of the medial meniscus.**
2. **Grade II chondromalacia patellae.**
3. **Mild joint effusion.**

Kindly correlate clinically. This is a professional opinion, not a diagnosis.

Dr. R. Kulkarni, MD (Radio-diagnosis)
Consultant Radiologist
